Establishment of the Oji Group Cybersecurity Policy
Toward Safe and Secure Business Operations and Sustainable Enhancement of Corporate Value

Oji Holdings (CEO: Hiroyuki Isono, Head office: Tokyo) is pleased to announce that it has established the Oji Group Cybersecurity Policy, which sets forth the Oji Group's fundamental approach to cybersecurity.

As digital technologies continue to advance, IT services—including cloud services and generative AI—are playing an increasingly important role in corporate activities. At the same time, cybersecurity risks are also growing, including information leaks, data tampering, and the diversion of funds resulting from cyberattacks and unauthorized access. In light of these circumstances, the Oji Group regards cybersecurity not merely as an IT-related issue, but as one of its important management issues.

The Policy establishes the basic principles concerning cybersecurity to ensure the appropriate protection of the information assets held by the Oji Group and the continuation of safe and secure business operations. These principles cover, among other matters, the roles and responsibilities of management, compliance with applicable laws and regulations, respect for human rights and privacy, the protection of personal and sensitive information, information asset management, measures concerning business partners and contractors, the use of external services—including cloud services and AI—management and monitoring frameworks, education and training, and continuous improvement.

In addition, the Oji Group will establish a framework to enable a prompt and appropriate response in the event of a cybersecurity incident. In the case of a serious incident that may have a significant impact on society, the Group will appropriately report the incident to the relevant authorities and make the necessary disclosures.

Based on this Policy, the Oji Group will continue its efforts to provide education and training for officers, employees, and other relevant personnel; manage and monitor cybersecurity; and conduct inspections and other related activities. The Group will also regularly evaluate and review the status of implementation and work toward the continuous improvement of its cybersecurity management.
